**tools for a hot lashing.**

**lash technology** has been really *lashing* out!

**spinlash** and the **artemis woman heated double curl gentle heat lash curler** are the most **novel eyelash contraptions** to date. now, i don't think you *need* either of these things, but since i've gotta keep you up to date on the **latest beauty technology**, and since **new gadgets** are always fun, here's **411** on both.

**how it works:** inspired by the **beauty trick** of taking a lighter to your lash curler before using it, you turn on this contraption and it warms up in **30 seconds**, then use it as your lash curler. this device is smart enough not to get too warm, so it is much safer than the lighter trick, because you can overheat your curler and burn your lashes or eye area (*ouch!!!!!!*).

**does it work?** i didn't think the curl was significantly bigger than my regular curler, but i would strongly urge you to use this instead of burning your lashes off. **\$24.99** at [artemiswoman.com](http://artemiswoman.com).
